

EZ-ACCESS™

"Drop Down" Conveyor

ADVANTAGE

- Allows production line operators the convenience of walking through, rather than climbing over, crawling under or walking around, long conveyor lines.

OPTIONS

- Vacuum Holddown Attachment
- Pneumatic "Lift and Drop" System

The A.W.T. EZ Access™ Drop-Down Conveyors are heavy-duty systems which allow easy-access for "walk-through" and the convenience of accessibility when cleaning/maintaining your equipment.

When accessibility is required on your larger-configuration conveyor line, you need the A.W.T. EZ Access Drop Down Conveyor!

Our unit will seamlessly integrate into your new or existing system, bolting to the floor or to machinery.

A.W.T. manufactures units with a manual or an automatic drop down. The up and down mechanism

comes complete with a variable speed conveyor to move your parts smoothly through to your next station or conveyor section.

Unit belts are approximately 2 feet long with more than five standard widths to choose from to fit every application and production line. Units drop down to be nearly perpendicular to the floor for easy "walk through" access. When in this position, it allows for easy maintenance and cleaning, eliminating the dangerous option of climbing over or crawling under machinery and equipment or the time consuming option of walking around the complete conveyor configuration. Various styles of conveyor belts are available.

We offer the option to tie it into your existing equipment, avoiding the need to adjust the speed of the existing conveyor, or as a stand-alone unit. The conveyors speed can be set to meet almost any application.

The drop down conveyors are available with our optional adjustable airflow vacuum belts. Vacuum belts hold down products to the moving conveyor and help to control lighter weight substrates when running at faster speeds.
